

Dear students,

the 2023 edition of the IEEE Magnetics Society Summer School will be hosted by the Politecnico di Bari, in the Italian region of Apulia.

A beautiful sea resort with complete conference facilities will be the school venue. As a social activity, we will visit Bari and the Politecnico.

Bari is a port, a university city, and the city of Saint Nicholas. You will discover its remarkable cultural heritage whilst walking through the small streets of Barivecchia and Murat quarter. The city, as well as the whole region, has become the destination of many tourists in the last two decades, also for the beautiful coastline, with many nice beaches and clear, blue sea.

Don't miss this chance! You will attend lectures about the fundamentals and applications of magnetism in an environment where the sun, good food and the warmth of people will give you an unforgettable experience.

Looking forward to meeting you in Apulia!

The co-Directors  
of the School
