

# DRIVING FORCE

## THE NATURAL MAGIC OF MAGNETS

by James D. Livingston

(Harvard University Press, \$14.95 in paperback)

A popular-science book on the history, legends, science, and technology of magnets that will entertain and inform technical and nontechnical readers alike.

"Covering subjects ranging from the science of magnetic forces to that great magnet in the sky, our planet, to the fakes who assure you that magnets will improve your wine and your sexual prowess, Livingston has written a book that is easy, entertaining, and often fascinating."

Leon Lederman, Nobel-Prize Physicist and author of *The God Particle*

"This book is a 'must' read for anybody who has an interest in cow magnets."

Dave Barry, syndicated humor columnist

"This is a charming book that presents the lore and science of magnetism in a remarkably accessible, authoritative, and fascinating fashion. It can be read with substantial profit by anyone from an interested high school student to someone who has spent much of his life working on magnetism. The author presents all of his materials with a light touch and with a sense of humor that makes his book a very real pleasure to read."

D. Allan Bromley, Yale University Dean of Engineering

"*Driving Force* combines conventional history, cultural history, and social history, constantly illustrating the interplay between science and culture. This is a book that can be read with profit by historians, anthropologists, and students of innovation and of science policy."

Harvey Brooks, John F. Kennedy School of Government

"This book will delight people interested in science and surprise people that thought science was dull."

Ivar Giaever, Rensselaer Polytechnic Institute (Nobel-Prize Physicist)

ROBOTMAN by Jim Meddick
